**HOW TO FIX ECHO SHOW NOT  
TURNING ON?**

- If you want to reboot the device, then you can follow the provided steps.
- First of all, you have to disconnect the power adapter from the outlet or device.
- After that, you should wait for 3 minutes.
- Now, connect the adapter again into the Echo Show.

**Reboot the Device**

- If you want to factory reset, then pursue the instructions given below.
- Get started by locating the Volume down and Mute keys on the upper side of the Echo Show.
- Then you should long press both keys at once until the Amazon logo comes. It will take 15 seconds.
- If the steps come on the display, then follow them to set up the device.
- Now, after complete the setup process, Echo Show will be back to its original form.

## Factory Resetting

- If you want to keep the smart home connections intact after the reset, then follow the provided steps.
- To get started, go to the Settings menu.
- After that, go to the "Device Options".
- You should select "Reset to Factory Defaults."
- Go to "Reset to Factory Defaults but retain Smart Home Device Connections."
- Now, tap on "Reset" to verify.

**Keep the Smart Home Connections Intact**

- If you want to set up the Echo Show, then pursue the instructions given below.
- To get started, you should choose the preferred language.
- Then you have to link to the Wi-Fi network.
- Now, sign in to the Amazon account.

**Set Up the Echo Show**
